

HAZMAT ROUTING SAFETY & SECURITY RISK ANALYSIS

William Quade

**Associate Administrator for
Enforcement and Program
Delivery**

**U.S. Department of
Transportation**

For the

**Packaging and Transport
of Radioactive Materials
(PATRAM) Conference**

5 October, 2010

Concerns About Hazmat Routing

- Motor Carriers – Want Safe, Direct Routes
- States – Need to provide Public Safety/Security
- All – Need a reliable, objective way to determine safety/security of routes

U.S. Routing Requirements

- Safety – Must Consider
 - Population Density
 - Types of Highways
 - Type/Quantity of Hazmat
 - Emergency Response Capabilities
 - Continuity of Routes
 - Stakeholder Input

- Security – No Requirement

Security Considerations

- Is there a credible terrorist threat?
 - Population Centers
 - Iconic Structures
 - Critical Infrastructure
- Are measures in place to protect potential targets?
 - Barriers
 - Proximity of police

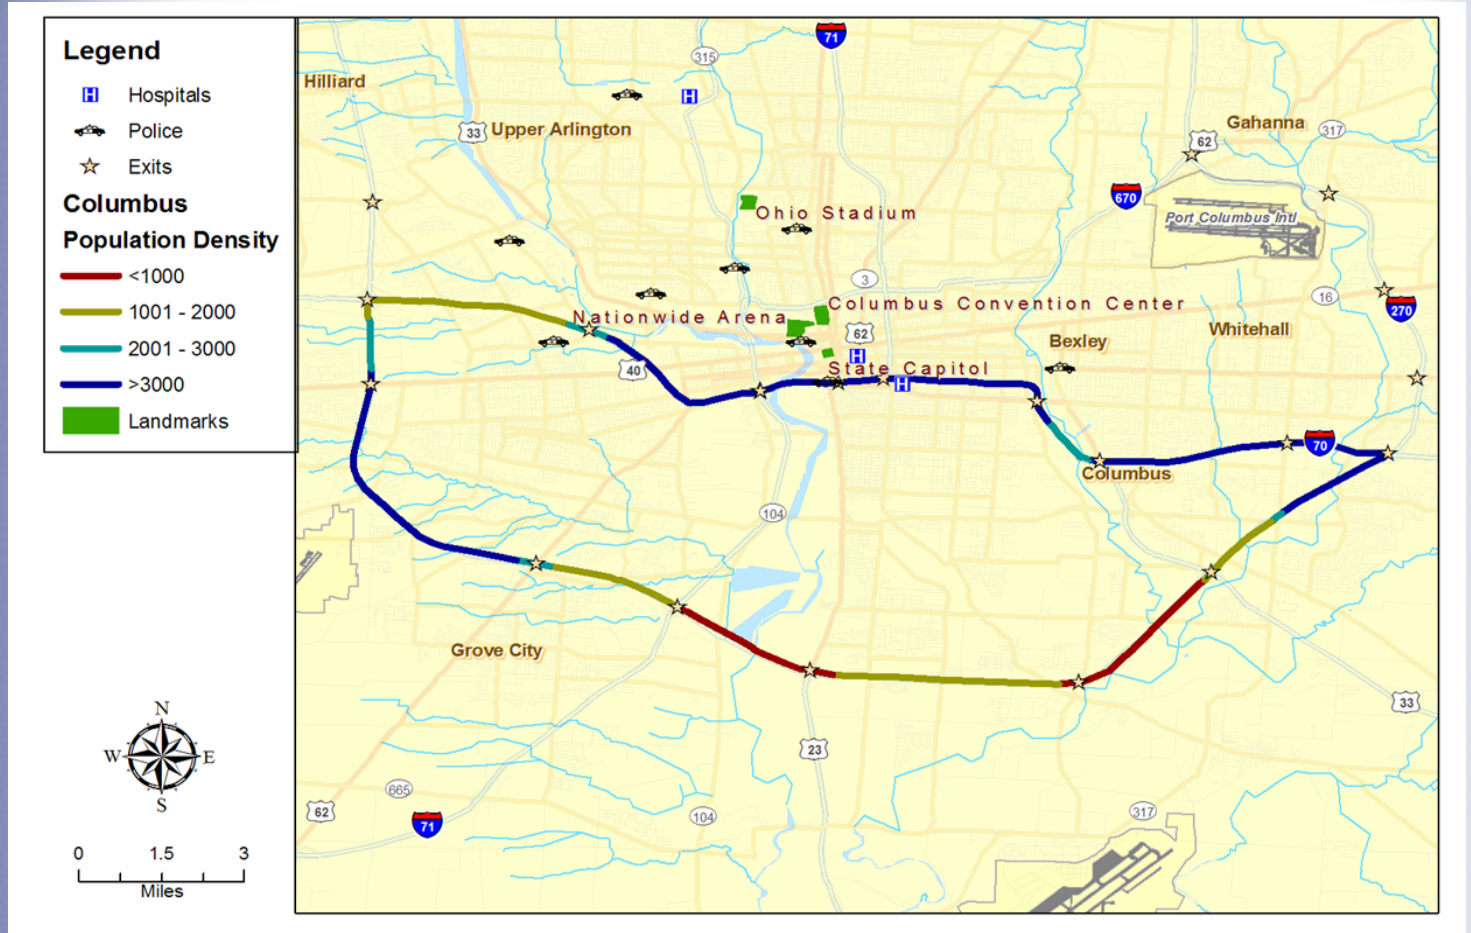

Selecting Routes Based on Security Considerations

- Minimize Travel Through Population Centers (+3,000 per mi²)
- Proximity to iconic targets
 - Weighted
 - x3 for National
 - x2 for Regional
 - x1 for Local
- Proximity to Critical Infrastructure

Web- Based Routing Tool

- Placed on a GIS Platform with
 - Routes
 - Population Density
 - Location of iconic structures
 - Location of critical infrastructure
 - Crash Information (Required input)
- Performs Safety Comparisons
 - Crashes/mile, Population, Distance
- Performs Security Comparisons
 - Population Density
 - Iconic Structures

Example - Columbus Ohio

Example – Columbus OH

Accident Rate Comparison

Route	AADTT	Distance	Serious Truck Crashes (4 years)	Truck Crash Rate/ million miles
I-270	12,334	20	37	0.103
I-70	14,498	15	104	0.328

Example – Columbus OH

Safety Comparison

Route	Truck Crash Rate/ million miles	Distance	Adjacent Population	Safety Risk
I-270	0.103	20	34,301	0.071
I-70	0.328	15	45,935	0.226

$$\text{Ratio} = 0.226/0.071 = 3.2 > 1.5$$

Screen Routes Based on Accident Rates

Instructions

(1) Review the data presented for route comparison based on accident rates (2) Select one or more routes to carry forward to security (population-based) screening, (3) Provide comments on rationale, and (4) Click Next to proceed to population screening.

Route Name	Current HM Route	Total Miles	Accident Rate	Most Direct	Safety B/A	C/D	Safety Preferred	Safety Assessment	Carry Forward	Analyst's Rationale
I-270S	<input checked="" type="checkbox"/>	20.0	1.03	<input type="checkbox"/>	3.18	1.33	This Route	This route meets criteria for selection. The accident rate is 68% lower than the rate for the most direct route	<input checked="" type="checkbox"/>	
I-70	<input type="checkbox"/>	15.0	3.28	<input checked="" type="checkbox"/>					<input checked="" type="checkbox"/>	

Columbus, OH Security Comparison

Population Density

Route	Urban Miles	Total Miles	Security	
			B/A	C/D
I-270	A=3	C=20	3.0	1.33
I-70	B=9	D=15		

- B/A > 1.5 - Use Alternate Route** 
- 1.0 < B/A < 1.5 – Use Distance factor**
- C/D < 1.25 - Use Alternative Route unless
C-D > 25 Miles**
- B/A < 1.0 – Use Direct Route**

Screen Routes Based on Urban Populations Along Route

Instructions
 (1) Review the data presented for route comparison based on urban population along the routes, (2) Select one or more routes to carry forward to iconic target and critical infrastructure screening, (3) Provide comments on rationale, and (4) Click Next to proceed to identification of iconic targets.

Route Name	Current HM Route	Urban Miles	Total Miles	Most Direct	Security B/A	C/D	Security Preferred	Security Assessment	Carry Forward	Analyst's Rationale
I-270S	<input checked="" type="checkbox"/>	3.0	20.0	<input type="checkbox"/>	3.00	1.33	This Route	This route meets criteria for selection. It is 66% shorter in urban distance than the most direct route	<input checked="" type="checkbox"/>	
I-70	<input type="checkbox"/>	9.0	15.0	<input checked="" type="checkbox"/>					<input checked="" type="checkbox"/>	

Columbus, OH Security Comparison

Iconic Structures

Name	Significance	Distance from Route	Response Distance
State Capital	Regional	0.8	0.5
Convention Center	Local	1.2	1.2
Nationwide Arena	Regional	0.7	0.7

State Capital $0.8/2 = 0.4 < 0.5$

Convention Center $0.7/1 = 0.7 = 0.7$

Screen Based on Proximity of Iconic Structures and Critical Infrastructure

Instructions
 (1) Select a route, (2) Enter distance from route for each iconic target, (3) Click Calculate to assess response effectiveness, (4) List critical infrastructure, (5) Repeat for remaining routes, (6) Select a prescribed route and provide rationale, and (7) Click Next to proceed with establishing restrictions.

Routes Chosen through Safety and Population Screening

Route Name	Current HM Route	Critical Infrastructure Count	Icons Ten Miles or Closer	Icons with Ineffective Response	Prescribed Route	Analyst's Rationale
I-270S	<input checked="" type="checkbox"/>	0	1	0	<input checked="" type="checkbox"/>	
I-70	<input type="checkbox"/>	0	3	3	<input type="checkbox"/>	

Iconic Target Distances and Effectiveness for Route Selected Above

[Calculate](#)

Iconic Target Name	Description	Target Significance	Distance from Route	Response Distance	Response Effective
Capital Complex		Regional Significance	0.8	0.5	<input type="checkbox"/>
Convention Center		Local Significance	1.2	1.2	<input type="checkbox"/>
Nationwide Arena		Regional Significance	0.7	0.7	<input type="checkbox"/>

Critical Infrastructure for Route Selected Above

[New C.I. Target](#) [Delete C.I. Target](#)

Critical Infrastructure Target Name

Baltimore, MD

Critical Infrastructure

Baltimore

Summary

- Safety of routing options can be compared using safety data
- Security of routing options can be compared looking at population, iconic structures, and critical infrastructure
- A web-based GIS routing tool can provide safety and security analysis of routes being considered for transportation of radioactive materials.
